Adjusting the internal ring detector

If you don't hear a ring tone from an incoming call in your V100 headset, be sure that the ring volume on your phone is set at a normal level. If you still do not hear a ring tone in the headset, turn the SENSOR ADJ knob clockwise to increase sensitivity and counterclockwise to decrease sensitivity.

It is recommended that you disable the ring detector when using the speaker phone with the V100. Press the ALERT ON/OFF button to disable the ring detector. The status light will turn red.

- You will no longer hear an incoming ring tone in your headset.
- The V100 headset ON/OFF button still flashes when there is an incoming call.
